

Minor Injuries Unit

After-care of wounds with steri-strip application

Information for patients

- The skin closures which have been applied to your wound are made of a material, which will hold your wound together while it heals, but when moistened will peel off
- To assist the healing process, please ensure your dressing is kept clean and dry for days, after which they can be removed by gently peeling off or soaking
- If you notice any swelling, inflammation or throbbing around your wound, please do not hesitate to contact us
