Cooper Genomics - Uniparental Disomy Testing (UPD) fee per embryo	£120

Paying for treatment

If you are not eligible for NHS funding and are undergoing treatment as a Private Patient, you will be expected to pay when you attend for your Nurse Consultation appointment. Payment for DI or HIUI will be expected on the day of insemination.

Cost of medication

Private Patients will receive their medication package from Stork pharmacy who will deliver to the address of your choice. You will incur further charges for any additional medication that may become necessary.

NHS-funded patients will receive their medication package from Healthnet Homecare and incur no charges. If you require additional medication from Leeds Fertility you will need to pay the current prescription charge for each item unless you are exempt from these charges. Any medications that are not used will not be accepted as 'returns' because the conditions of storage can not be verified and therefore they can not be dispensed again.

***Please note when comparing our prices between clinics, we may appear expensive but this is because everything is included and there are no extra charges. When doing comparisons please ensure that you compare the total cost of what you are receiving as part of your treatment.**

If you have any questions or queries please do not hesitate to contact the Finance Office on: 0113 206 3157 or Private Patients Office on: 0113 206 3156 / 0113 206 3126.
