

This booklet uses easy words and pictures.

You might want to ask someone to help you read it.

Group A Streptococcus (Strep A) is a bacteria or germ.

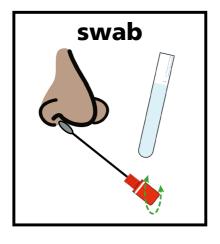

It can live on your skin or inside your body.

Some people have Strep A and do not know it is there.

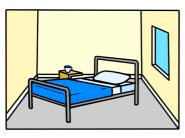

If you are poorly and we are not sure why, staff might test you for Strep A.

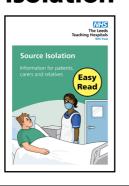

You will have a swab taken from a wound or your throat or somewhere else.

side room

safe

source isolation

If your test is positive, you have Strep A.

You will move to a side room or a separate area on the ward.

This is to keep you and everyone in hospital safe.

And help stop the spread of infections.

This is called Source Isolation. We have a leaflet about this.

Scan the QR code to read it.

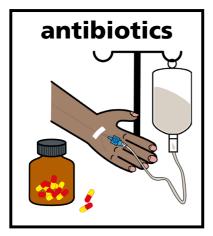

Staff may need to wear gloves and aprons when caring for you.

You and your visitors must wash your hands regularly.

Sometimes you might have antibiotics to treat the infection.

Sometimes you do not need any treatment at all.

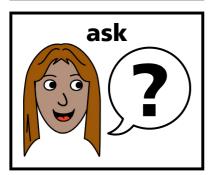

Do not touch any equipment, drips, catheters or lines attached to you.

Your doctor or nurse will tell you when you can leave hospital.

Having Strep A should not delay this.

If you have any questions, you can ask the staff.

If you have a Learning
Disability or Autism
diagnosis please
complete a Health
Passport and return it to
the Learning Disability
and Autism team on:
