

help with breathing This booklet uses easy words and pictures.

You might want to ask someone to help you read it.

A tube in your neck to help you breathe is called a tracheostomy or a trachy.

It is used when you need help with your breathing for more than a few days.

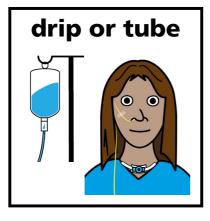

At first you won't be able to speak, eat or drink.

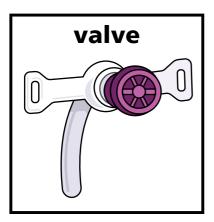

This is normal.

Staff will give you new ways to communicate while you cannot talk.

You will have your food and drinks through a drip or tube.

breathing and

talking

The Speech and Language Therapist or Physio might put a valve on your tube.

This will help you breathe through your nose and mouth.

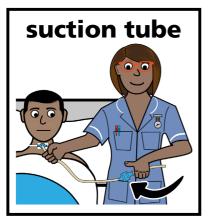

It will also mean you can talk

Do not touch your tracheostomy or the dressing or tapes around it.

## cleaning tracheostomy

Staff will help you clean and care for your tracheostomy.

uncomfortable

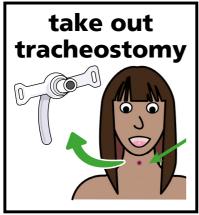

Staff might need to use a suction tube to clean or clear your tracheostomy tube.

It may feel uncomfortable in your neck.

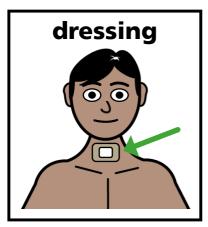

It might make you cough.

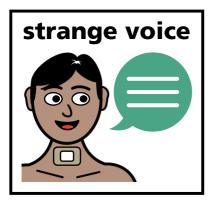

This is normal.

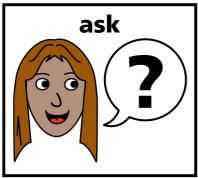

Staff will take the tracheostomy out.

They will put a small dressing or plaster over the wound.

Your voice may sound strange at first.

Do not worry, this is normal.

If you have any questions, you can ask the staff.

If you have a Learning Disability or Autism diagnosis please complete a Health Passport and return it to the Learning Disability and Autism team on:
