

## Chronic kidney disease - Haemodialysis

Information for patients

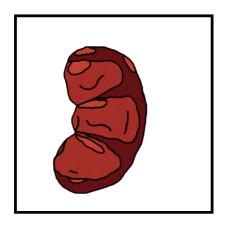

This booklet uses easy words and pictures.

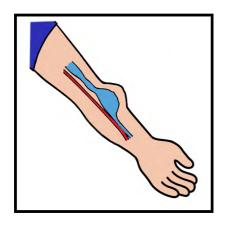

You might want to ask someone to help you read it.

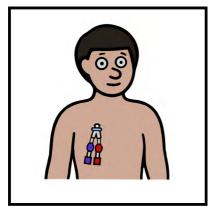

Haemodialysis is using a machine called a dialyser

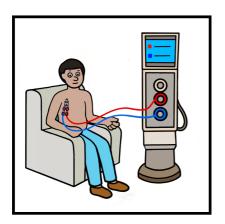

It does the work of your kidneys to clean your blood.

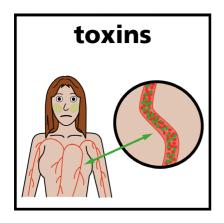

You will have either a fistula which the dialyser will connect to.

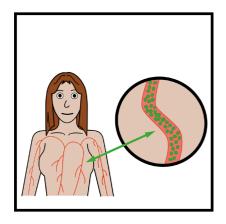

Or you will have a permanent line inserted into a vein.

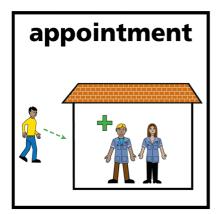

These are used to attach you to the dialyser machine.

Blood from your body goes into the machine and the toxins are removed

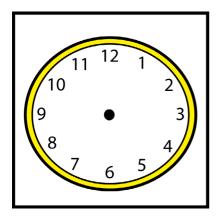

The clean blood then goes back into your body.

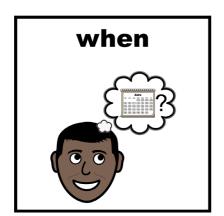

You will visit the department before to prepare.

You will get to meet the team before your first session

Each dialysis treatment takes four hours although this can sometimes be longer or shorter.

You will go for dialysis on the same day, and at the same time each week.

You can bring activities to do while you wait.

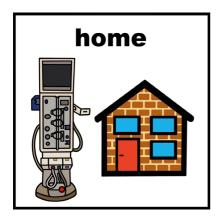

You can have dialysis at hospital or a clinic closer to home.

Some people even have dialysis at home

Clinics in the community are called satellite units.

To have dialysis at home you will need space for the specialist equipment.

You will need someone who is able to support all the sessions.

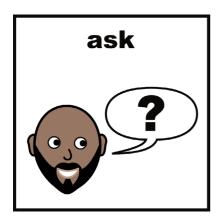

There is a specialist home haemodialysis team that support this service

We have other easy reads available to help you understand.

If you have a Learning
Disability or Autism
diagnosis please
complete a Health
Passport and return it to
the Learning Disability
and Autism team on:
leedsth-tr.ldautism@nhs.
net

If you have any questions, please speak to your team.
